<u>SCHEDULE D – TOLL RESTRICTIONS</u>

DataTalk Telecom, Inc. has entered into an agreement to provide a telephone system for your company.   DataTalk recommends restricting outbound feature capability and international toll call access. Further, we recommend that you contact your carrier about additional toll restrictions that they can provide. Please read the attached memo for suggestions on managing your system's capabilities.

At installation, DataTalk recommends blocking "ALL" outbound feature and international dialing capabilities. While DataTalk does not guarantee the customer's protection, or assume any liability for costs, these actions will block most currently known methods of phone system toll hacking.

Should the customer request international toll calling capability, DataTalk will provide a table for your selection of allowed area codes. Customer agrees that any toll abuse and/or hacking are the customer's responsibility.

Should the customer request that outbound dialing features be allowed, DataTalk will do so, with the customer's agreement that any incidences of hacking are the customer's responsibility and DataTalk Telecom, Inc. takes no responsibility for unauthorized toll costs, inconvenience, or loss of service.
