

Lighting the Way to Efficient Patient Care

How Interoperability and Analytics
Change the Nurse Call Paradigm

Get to know the **real** Rauland.

Building Responsive Care

Integrating hospital systems, including nurse call, brings connected care directly into the patient room, optimizing care and minimizing fall risks within hospitals.

When a patient is admitted, relevant EHR information—like fall risk—can illuminate the corridor light outside their room.

Triggering a bed alarm through a smart bed or pillow speaker, immediately notifies the patient's assigned nurse and escalates the response, as needed.

Bringing RTLS data into Rauland Enterprise allows alarm cancellation without action by the nurse, saving time and making reporting precise.

Seamless integration with virtual nursing creates an efficient workflow between onsite and virtual providers, enhancing patient outcomes.

Interoperability between Responder Enterprise and integrated technologies allows real-time data sharing and coordination among various healthcare devices and platforms. Fostering seamless communication, clinicians and interdisciplinary teams can receive time-critical messages, allowing staff to prioritize patient care, enhance hospital efficiency and improve patient outcomes and satisfaction.

ENTERPRISE INTEROPERABILITY INTEGRATION

EHR software

Automated software built around a single comprehensive health record, helping care teams make measurable improvements in care quality and cost reductions.

Mobile app

Instant clinical communication and collaboration to securely engage colleagues across every department to improve patient care delivery.

RTLS badges

Real-time location solutions for nurse call, staff duress, asset tracking and patient flow.

Virtual telecare

Patient engagement platform using multi-modal communication including virtual telecare to improve experience for patients, families, and staff.

Smart beds

Innovative technology enhances patient and caregiver safety with real-time alerts to help reduce fall risk.
